

NATIONAL BIO SAMPLE CENTRE Oxford

Product: Lakeside Demountable Aluminium Flood Barrier System, 600mm H

Completion Date: October 2016

The UK Biocentre identified the requirement for flood defences to the 6 main entrances of its centre.

Given the highly sensitive nature of works carried out in the centre, it was essential that the client found a credible and well-established supplier with a robust product solution.

Lakeside were selected due to their established 29 years' experience and reputation, and the exclusive demountable flood barrier system offered as the optimal solution for all doorway openings.

"I'd like to thank all the members of Lakeside staff who worked on this project. We are impressed with the design of the flood defence system and how quick and easy it is to fit and remove".

Mr Tarquin Davies
Facilities Manager-NIHR BC, UK Biocentre

Client:

A National Resource to Support biomedical and clinical research

In association with:

One of the world's leading universities
