FLOOD SOLUTIONS

## PRODUCT DATA SHEET

# LFS Non-Return Valves (NRVs)

### Types:

#### 22mm NRV

Ideal for preventing flood water from entering a building through sink/WC overflows etc.

Made from PVC, with compression fittings and rubber seals

#### 30/40/50mm NRV

Suitable for all horizontal waste pipes of this diameter. This device will prevent flood caused by backflow through the sewage system up into sinks and urinals etc.

Constructed from PVC with rubber seals. This NRV is available in either compression fit or solvent weld.

#### 110/160mm Horizontal NRV

Suitable for horizontal waste pipes of 110mm or 160mm diameter. This type of NRV is normally used on exposed pipes or when constructing a purpose build inspection chamber.

Made from polypropylene of the highest quality with a supplemented regulator which increases the resistance to sunlight as well as other atmospheric factors. High grade seals and stainless-steel components.

## LAKESIDE FLOOD SOLUTIONS

### 110/160mm Push-Fit NRV

Suitable for horizontal waste pipes of 110mm or 160mm diameter. This NRV is fitted into the end of a pipe, quite often within an existing inspection chamber. Available in several variants to fit clay or plastic pipes.

Manufactured in the UK from uPVC, the NRV is certified tested to BS EN 13564 (anti-flooding devices for buildings).

### 110/160mm Vertical NRV

This backwater valve is for vertical mounting, where horizontal fitment is not possible. It works automatically by the use of a float built into the internal flap.

Made from polypropylene of the highest quality with a supplemented regulator which increases the resistance to sunlight as well as other atmospheric factors. High grade seals and stainless-steel components.
